A scatter plot with two parabolic curves. The x-axis and y-axis are shown. There are two sets of data points, each forming a parabolic shape. One set is in the upper right quadrant, and the other is in the lower left quadrant. Dashed vertical lines connect the vertices of the parabolas to the x-axis.

A scatter plot showing data points (black dots) and a fitted curve (solid line) that is U-shaped, indicating a non-linear relationship. A dashed vertical line marks the position of the minimum of the curve. A solid straight line represents a linear regression fit, which appears to be a poor fit for the data points.
